

RITIK RANJAN PATI

Cloud & DevOps Engineer

ritikranjanpati@gmail.com | +91-9348520919 | [LinkedIn](#) | [GitHub](#)

CAREER OBJECTIVE

Cloud & DevOps Engineer with hands-on project experience across AWS, Azure, GCP, Terraform, Docker, Kubernetes, and CI/CD pipelines. Eager to apply a strong academic foundation and practical skills to build scalable cloud infrastructure, automate deployments, and contribute to a forward-thinking organization.

TECHNICAL SKILLS

Cloud (AWS – Primary): EC2, VPC, S3, IAM, CloudFront, ALB, Auto Scaling, Transit Gateway, WAF, GuardDuty, CloudWatch, RDS, Lambda, Route 53, EKS

Azure: VMs, VNets, NSG, VMSS, Storage

GCP: Compute Engine, VPC, Cloud SQL, IAM

IaC Tools: Terraform (Primary), OpenTofu, Ansible

CI/CD & GitOps: Jenkins, GitHub Actions, GitLab CI/CD, Argo CD (Auto-Sync, Self-Healing)

Containers & Orchestration: Docker, Docker Compose, Amazon ECR, Kubernetes (EKS/ECS) — Pods, Deployments, Services, HPA, Helm

Monitoring & Logging: Prometheus, Grafana, Node Exporter, Dynatrace (Familiar), Datadog (Familiar)

Scripting: Python (AWS Lambda), Bash

Security: IAM Policies, Security Groups, NACL, WAF, GuardDuty

Version Control: Git, GitHub, GitLab

Operating System: Linux

INTERNSHIP EXPERIENCE

DevOps Intern — Naresh I Technologies

Feb 2025 – Present

- Applying AWS, Terraform, Kubernetes, Docker, CI/CD, and DevOps best practices in real-world, production-style lab environments.

End-to-End Microservices Deployment on AWS

AWS · Terraform · Kubernetes · CI/CD · GitOps · Monitoring

- Designed and provisioned scalable AWS infrastructure using Terraform, creating reusable modules for VPC, EC2, RDS, EKS, Security Groups, ALB, and Auto Scaling — reducing manual errors and deployment time.
- Built CI/CD pipelines using GitHub Actions to automate Docker image builds and push to Amazon ECR, enabling seamless and repeatable application delivery.
- Containerized microservices with Docker and deployed on Kubernetes (EKS) using YAML manifests; configured HPA for dynamic workload scaling.
- Implemented GitOps workflows using Argo CD with auto-sync and self-healing to maintain desired cluster state and reduce drift.
- Integrated Prometheus, Grafana, Node Exporter, and Loki for full-stack observability — metrics, dashboards, and log aggregation.
- Automated EBS snapshots and log management using AWS Lambda, CloudWatch, and EventBridge, reducing operational overhead.

PROJECTS

Database Migration: EC2 (Self-Managed) to Amazon RDS

AWS RDS · High Availability · Security · Data Integrity

- Planned and executed end-to-end database migration from self-managed EC2 MySQL to Amazon RDS with minimal downtime and zero data loss.
- Configured automated backups, multi-AZ failover, and parameter groups in RDS to improve availability and reduce DBA overhead.

- Updated application connection strings, security group rules, and NACL configurations for secure RDS access from the application tier.
- Validated data integrity pre- and post-migration using checksums and row-count verification scripts.

Automated Infrastructure Monitoring with Ansible, Prometheus & Grafana

Ansible · Prometheus · Grafana · Linux · EC2

- Automated Node Exporter installation and systemd service management across multiple EC2 instances using Ansible playbooks, ensuring consistent configuration.
- Configured Prometheus with EC2 service discovery to dynamically scrape metrics without manual target updates.
- Wrote PromQL queries to monitor CPU utilization, memory usage, disk I/O, and node availability across the fleet.
- Built Grafana dashboards for real-time infrastructure health visualization; validated scrape targets using Prometheus UI and Grafana Explore.

Serverless End-to-End Deployment Through Terraform

Terraform · AWS Lambda · Amazon S3 · MongoDB · Amazon SNS

- Designed and deployed a serverless application architecture end-to-end using Terraform, provisioning Lambda functions, S3, SNS topics, and supporting IAM roles/permissions as reusable, version-controlled infrastructure.
- Hosted the frontend (index.html) on Amazon S3 and integrated it with backend Lambda functions written in Python to handle application logic and API requests.
- Built event-driven workflows where Lambda functions process incoming events and publish notifications via Amazon SNS to downstream subscribers.
- Integrated MongoDB as the application data store, with Lambda functions handling reads/writes for a fully managed, server-free backend.
- Automated the complete provisioning and teardown of the stack through Terraform, enabling repeatable deployments across environments with zero manual configuration.

CERTIFICATIONS

- NPTEL – Cloud Computing and IoT 4.0, Silver Grade (IIT — National Programme on Technology Enhanced Learning)

EDUCATION

Master of Computer Applications (MCA)

2023 – 2025

GIFT Autonomous College, Bhubaneswar, Odisha | CGPA: 8.13/10

KEY STRENGTHS

- Strong problem-solving with hands-on cloud/DevOps project experience
- Quick learner, adapts fast to new tools
- Solid grasp of IaC, automation, and cloud-native best practices
- Collaborative team player focused on continuous learning
