PROFESSIONAL SUMMARY

Cloud & DevOps Engineer with 1 year of experience in DevOps Mentoring and hands-on experience designing and automating AWS infrastructure using Terraform, building CI/CD pipelines with GitHub Actions, and deploying containerized microservices on Kubernetes (Amazon EKS) with GitOps (Argo CD). Experienced in observability with Prometheus, Grafana, and Loki, and in serverless automation with AWS Lambda and Python. Seeking a Cloud / DevOps Engineer role to build scalable, secure, and automated cloud platforms.

TECHNICAL SKILLS

Cloud (AWS):	EC2, VPC, S3, IAM, ALB, Auto Scaling, EKS, ECR, RDS, Lambda, CloudFront, Route 53, Transit Gateway, WAF, GuardDuty, EventBridge, SNS
Azure:	VMs, VNets, NSG, VMSS, Storage
GCP:	Compute Engine, VPC, Cloud SQL, IAM
IaC :	Terraform, OpenTofu, Ansible
CI/CD & GitOps:	GitHub Actions, Jenkins, GitLab CI/CD, Argo CD
Containers:	Docker, Docker Compose, Kubernetes, Amazon EKS, Amazon ECS, Helm, HPA
Monitoring & Logging:	Prometheus, Grafana, Loki, Node Exporter, PromQL, CloudWatch; familiar with Datadog and Dynatrace
Scripting & OS:	Python, Bash, Linux
Version Control:	Git, GitHub, GitLab

EXPERIENCE

AWS DevOps Mentor — Naresh I Technologies | JAN 2026 – Present

- Mentoring students in AWS, Linux, Docker, Kubernetes, Terraform, and CI/CD.
- Resolving technical doubts and troubleshooting DevOps issues.
- Guiding students in hands-on cloud projects, CI/CD pipelines, and deployments.
- Assisting with infrastructure automation, monitoring, and logging using Terraform, Prometheus, and Grafana.

PROJECTS

Microservices Deployment on Amazon EKS with CI/CD, GitOps & Observability

- Provisioned AWS infrastructure with Terraform using reusable modules for VPC, EC2, RDS, EKS, Security Groups, ALB, and Auto Scaling, reducing manual errors and deployment time.
- Built CI/CD pipelines with GitHub Actions that automate Docker image builds and push to Amazon ECR for repeatable application delivery.
- Containerized microservices with Docker and deployed them to Amazon EKS using Kubernetes manifests; configured HPA for dynamic workload scaling.
- Implemented GitOps with Argo CD (auto-sync and self-healing) to maintain desired cluster state and prevent configuration drift.
- Integrated Prometheus, Grafana, Node Exporter, and Loki for full-stack observability: metrics, dashboards, and centralized log aggregation.
- Automated EBS snapshots and log management using AWS Lambda, CloudWatch, and EventBridge, reducing operational overhead.
- Configured Amazon Route 53 for DNS routing and AWS WAF to protect the application from common web attacks and malicious traffic.

Automated Infrastructure Monitoring Using Ansible, Prometheus & Grafana

- Automated Node Exporter installation and systemd service configuration across multiple EC2 instances using Ansible playbooks.
- Configured Prometheus to collect infrastructure metrics using EC2 service discovery.
- Developed PromQL queries to monitor CPU utilization, memory usage, disk I/O, and server availability.
- Created Grafana dashboards to visualize real-time infrastructure metrics and overall server health.
- Configured monitoring targets and scrape intervals to ensure continuous metric collection.
- Implemented alert rules to identify high resource utilization and server availability issues for faster troubleshooting.

Database Migration: Self-Managed EC2 MySQL to Amazon RDS

- Planned and executed migration of a self-managed MySQL database from EC2 to Amazon RDS with minimal downtime and data integrity.
- Configured RDS automated backups, Multi-AZ deployment, and custom parameter groups for availability and performance.
- Updated application connection strings and Security Group rules to enable secure database connectivity.
- Performed pre- and post-migration validation using SQL queries, row counts, and checksum verification.
- Configured database access permissions and network security to restrict unauthorized access

Serverless Application Deployment Using Terraform

- Provisioned AWS Lambda, S3 static website hosting, SNS topics, and IAM roles using Terraform.
- Developed Python-based AWS Lambda functions to automate event-driven application workflows.
- Integrated Lambda with MongoDB for database read/write operations and SNS for notification delivery.
- Created reusable and version-controlled Terraform configurations to manage infrastructure.
- Configured IAM roles and policies following the principle of least privilege.
- Automated infrastructure provisioning and teardown using Terraform commands.

EDUCATION

Master of Computer Applications (MCA) — GIFT Autonomous College, Bhubaneswar, Odisha | 2023 – 2025 | CGPA: 8.13/10

CERTIFICATIONS

- Cloud Computing and IoT 4.0, Silver Grade | NPTEL (IIT)
